

Classter features

School Management

Manage students, courses, classes, teachers and extracurricular activities. Manage family structures, demographic and medical data, multiple student academic programs and print student cards (RFID Cards). Support for multiple institution types, regions or network of schools in a single system.

Academic Management

Create and manage classes, monitor course plans, timetables and progress. Set multiple grade structures and automatically calculate grades. Manage exams, assignments, duties, attendance and academic behavior. Support for multiple academic systems and grading structures.

School CRM

Manage candidate registration process and admission checklist. Carry out online candidate registration. Automatically create and send bulk SMS and emails to students, parents and teachers. Monitor student performance, bullying behavior, and handle parent/student complaints. Manage meetings, actions and events. Create announcements and news.

Financial Management

Create multiple financial arrangements per student using advanced installment plans. Manage pricing policies, discount policies and use automated workflows for financial agreements. Monitor revenue and student accounting cards. Perform automated billing and online payments. Forecast financial profits and view accounting balances. Bill extra curriculum activities and services.

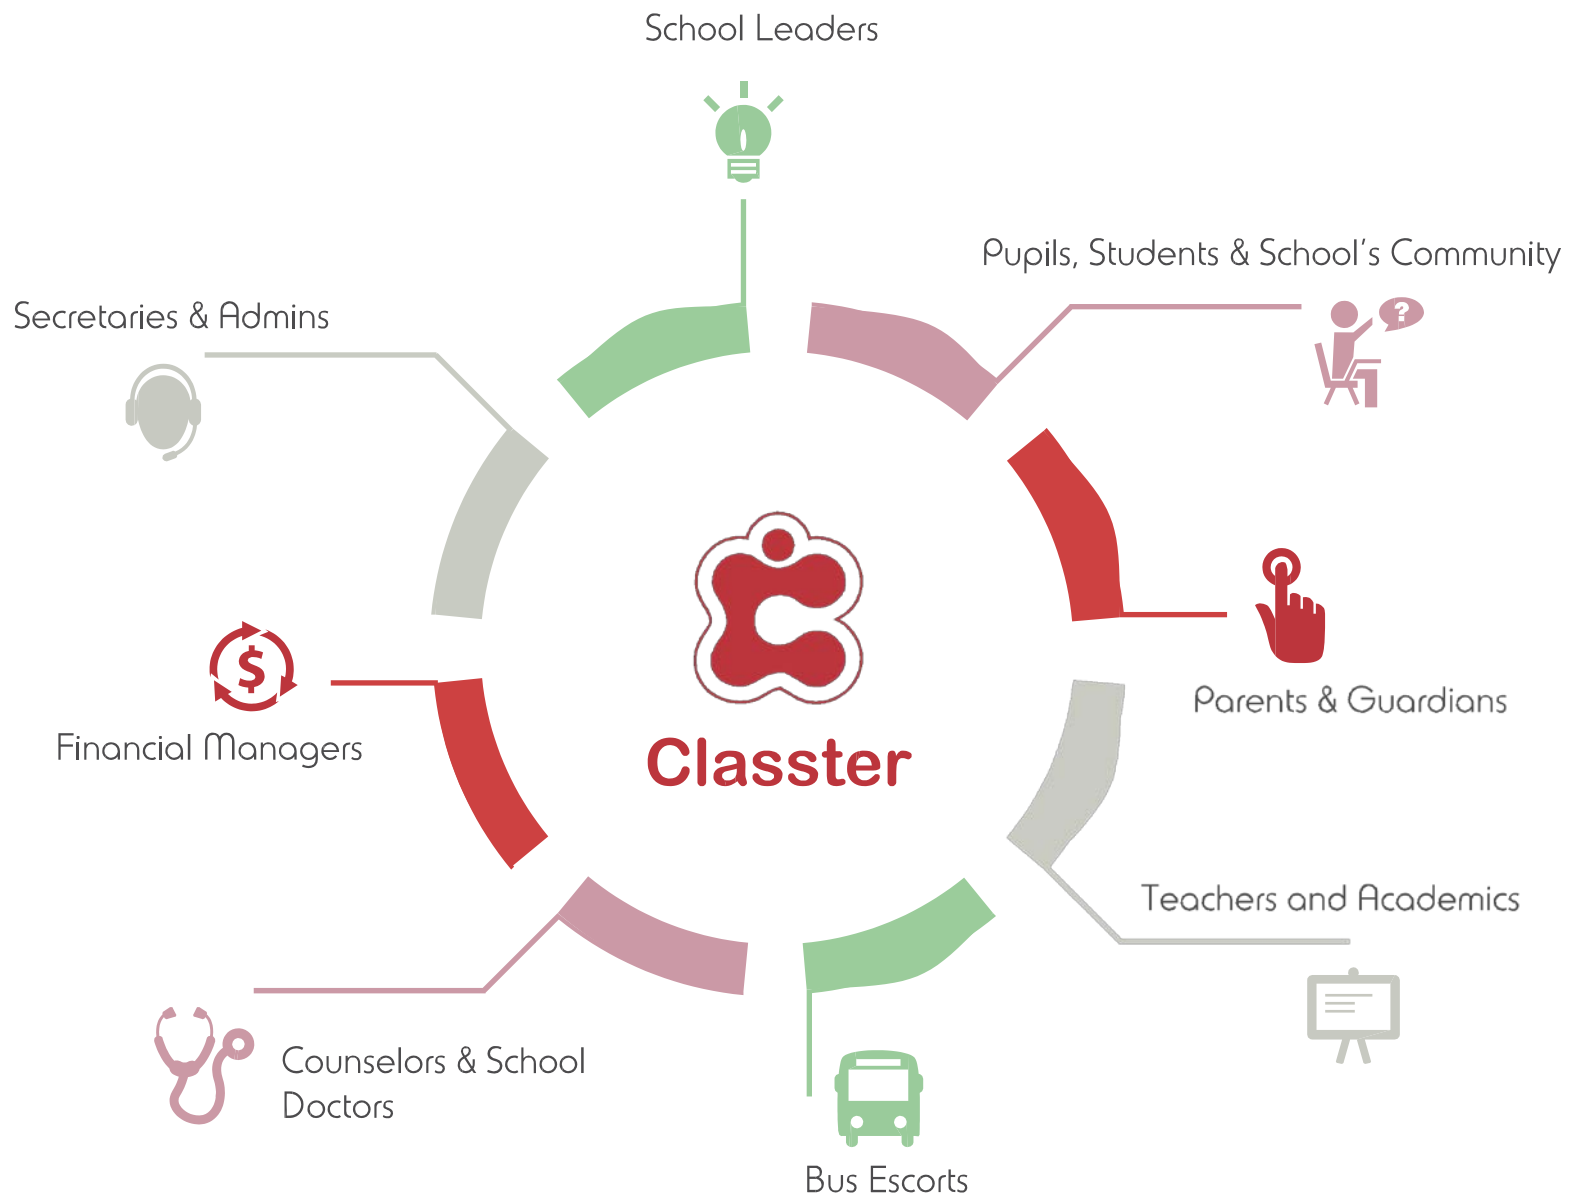

Transportation Management

Create bus and driver lists, bus zones and routes and estimate route costs. Manage student seating and student pick up/drop-off. Notify parents through bulk SMS on bus arrival. Manage daily exceptions and changes.

Library Management (Physical and/or Digital)

Upload/Register course libraries, books per course and book structures. Plan course delivery based on book structure. Retrieve book information through isbn.com integration (ISBN10 and ISBN13 support). Lend/borrow books with the use of barcodes or RFID. Search and reserve books online.

Direct "horizontal" communication among all users.

3+1 Classter Advantages

- An open school community: Direct communications with teachers, students and parents.
- An adaptive learning system which includes personalized monitoring of student performance.
- A unified/integrated solution, easy to use and expandable, that helps educational institutions reduce their overall operating costs.
- A management solution that increases teacher and student performances and improves the educational outcome for any institution.

Business Intelligence and Reporting

Use BI tools for monitoring school performance and statistical analysis tools for teachers. Integrated with MS Report Builder for customizable reports per user.

Security, Customization and Special Features

Classter is a cloud-based database hosted on Microsoft Azure, performs automated database back-up and uses SSL encryption. Automatically create Office365 accounts for teachers, students and parents. Advanced wizards and forms' designs allows easy customization.

LMS tools and E-Learning

Automatically create courses and assignments on Moodle LMS or Microsoft OneNote. Create personal Notebook for each teacher and student for a more direct communication that strengthens cooperation and improves efficiency. Integrated with Sharepoint course libraries.

Personalized profiles per User

Each individual, whether they are a teacher, a student, parent or school admin has his/her personal dashboard. Personalized profiles are built using modern communication tools that help improve interactions with school admins, teachers, students and parents.

In-Class Management

With Classter App for Teachers, any teacher could organize their class, set up a session, set student seating and monitor performance. During a session additional features could be used in real time to further assist the teacher; add absences, comments, and acknowledge student achievements by adding awards. Students (and parents) are notified of their performance and achievement through their own personal profiles.
